3-Step Program to Fast HPLC

The advent of sub 2 μ m HPLC particle size technology allows significant increases in sample throughput or increased chromatographic resolution.

As with all new technology, finding the right approach to implementation to realise the significant benefits can be daunting.

Let Crawford Scientific help you with our 3 Step Program:

Step 1 - Send us your existing method details

Step 2 – You get a ‘Translated Method’ method and a Zorbax RRHT Column

Step 3 – Free Seminar at your premises and demonstration of your Fast HPLC method using your current equipment

Agilent Technologies was the first company in the world to break the 2 μ m porous particle size barrier in 2003.

Zorbax RRHT 1.8 μ m columns have patented engineered particle size distribution which offers the benefits of enhanced efficiency and a reduction in runtime WITHOUT HAVING TO BUY EXPENSIVE NEW EQUIPMENT – guaranteed!

Seminar Includes: Free Method Translation Software!

To Switch on to the 3 Step Program:

Call: 01357522961

E-mail: enquiries@crawfordscientific.com

Or visit our website and follow the 3-step links

Please quote promotional code: CS66 when ordering

3-Step Program to Fast GC

The advent of robust reduced internal diameter GC column technology allows significant increases in sample throughput or increased chromatographic resolution using 0.18mm i.d. GC columns.

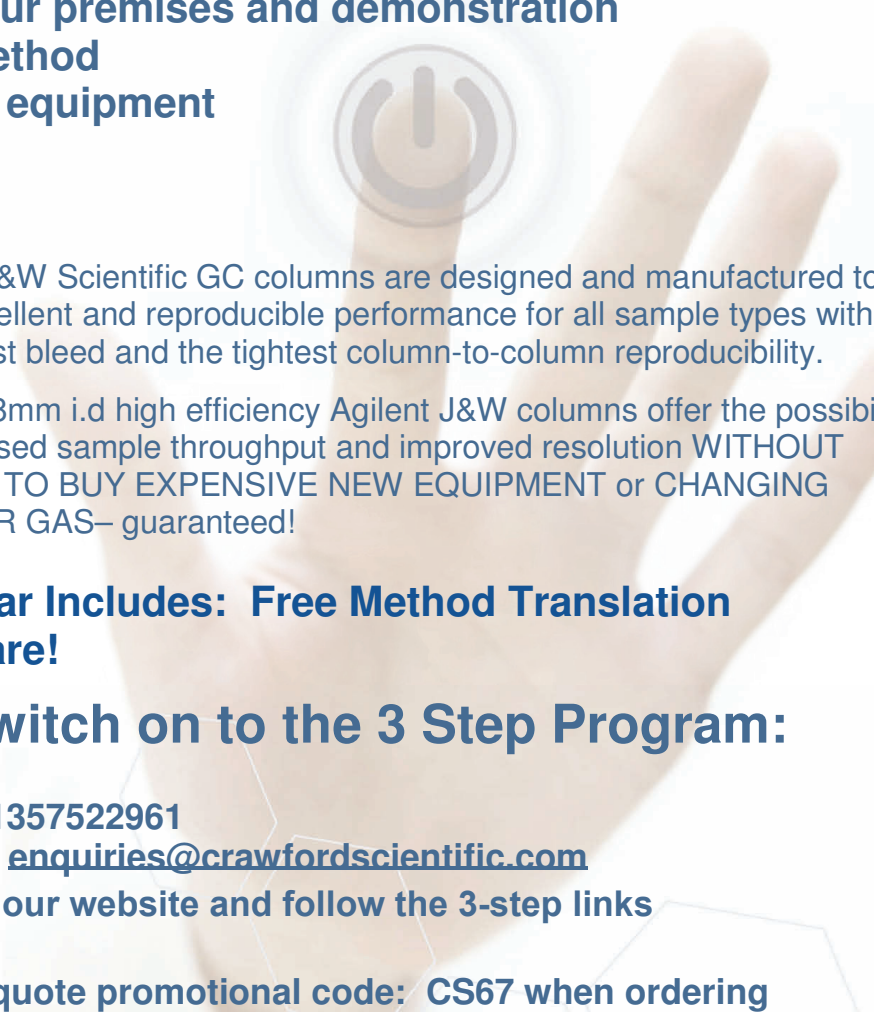

As with all new technology, finding the right approach to implementation to realise the significant benefits can be daunting.

Let Crawford Scientific help you with our 3 Step Program:

Step 1 - Send us your existing method details

Step 2 – You get a ‘Translated Method’ method and an Agilent J&W 0.18mm GC Column

Step 3 – Free Seminar at your premises and demonstration of your Fast GC method using your current equipment

Agilent J&W Scientific GC columns are designed and manufactured to offer excellent and reproducible performance for all sample types with the lowest bleed and the tightest column-to-column reproducibility.

New 0.18mm i.d high efficiency Agilent J&W columns offer the possibility of increased sample throughput and improved resolution WITHOUT HAVING TO BUY EXPENSIVE NEW EQUIPMENT or CHANGING CARRIER GAS– guaranteed!

Seminar Includes: Free Method Translation Software!

3-Step Program to Fast SPE

The advent of robust sub-10 μ m SPE Sorbent technology allows significant decreases in extraction protocol processing times and improved sample recovery / analytical sensitivity.

As with all new technology, finding the right approach to implementation to realise the significant benefits can be daunting.

Let Crawford Scientific help you with our 3 Step Program:

Step 1 - Send us your existing extraction protocol

Step 2 – You get a ‘Translated Method’ method and a box of CEREX Sub-10 μ m SPE tubes or a 96 well-plate development kit

Step 3 – Free Seminar at your premises and demonstration of your Fast SPE extraction protocol using our amazing new Positive Pressure Processors

CEREX Sub 10 μ m high efficiency extraction sorbents allow the use of smaller sample sizes, lower elution volumes and faster extraction protocol processing.

The sorbents are highly robust and available in all phase types in both cartridge and 96 well-plate formats and crucially **WORK WITH YOUR EXISTING EXTRACTION PROTOCOLS**

Seminar Includes: Positive Pressure Processor demonstration
